DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed January 21, 2003 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

Drawings

2. The drawings are objected to because Figures 2, 4-6, and 8 should include labeled boxes that describe the component, in addition to the reference number. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Election/Restrictions

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-65, drawn to a method of monitoring an electric arc, classified in class 702, subclass 76.
 - II. Claims 66-83, drawn to a method for monitoring occurrence of sparks aboard aircraft, classified in class 702, subclass 58.

The inventions are distinct, each from the other because of the following reasons:

4. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case a method of monitoring an electric arc can be used at a gas station for automobiles.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. During a telephone conversation with Jaye Heybl on December 22, 2003 a provisional election was made without traverse to prosecute the invention of a method of monitoring an electric arc, claims 1-65. Affirmation of this election must be made by applicant in replying to this Office action. Claims 66-83 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

EXAMINER'S AMENDMENT

14/A

8. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

9. Authorization for this examiner's amendment was given in a telephone interview with Jaye Heybl on December 22, 2003.

10. The application has been amended as follows:

Claims 66-83 are cancelled.

Terminal Disclaimer

11. The terminal disclaimer filed on December 23, 2003 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent Number 6,362,629 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

12. The following is an examiner's statement of reasons for allowance: Scott et al. teach a arc fault detection for aircraft. Roberts teaches a corona discharge detection system for detecting the presence of any corona discharge in an electrical system. The prior art of record does not teach selecting a fractal subset of said arc signature characterized by relatively long travel along said monitored circuits and low cross induction among neighboring circuits and monitoring said electric arc from said fractal subset of said arc signature.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

13. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Roberts teaches a corona discharge detection system for detecting the presence of any corona discharge in an electrical system. Carter teaches corona discharge detecting apparatus including gateable amplifiers controlled by flip-flop means. Blades teaches a method and apparatus for detecting arcing in alternating-current power systems by monitoring high-frequency noise. Blades teaches a method and apparatus for detecting arcing in ac power systems by monitoring high frequency noise. Boaz teaches methods and an apparatus for detecting and locating corona discharge in high-voltage, fluid filled electrical inductive apparatus. Scott et al. teach a arc fault detection for aircraft. Dollar II teaches a vehicle electrical system arc detection apparatus and method. Golden, Jr. et al. teach a method for on-line monitoring and control of the performance of an electric arc furnace.
